Art Unit: 3634

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 16 is rejected under 35 U.S.C. 102(b) as being clearly anticipated by Kramer. Kramer discloses a closure assembly mounted within an opening comprising a jamb (120) having an interior and a jamb pocket (124), a retractable biased screen (104) contained within the jamb pocket (124), a latch (164), a latch receptacle (116), and top and bottom tracks (106 and 108) which guide the screen between open and closed positions.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 2, and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kramer in view of Warnick. All of the elements of the instant invention are discussed in detail above except providing the closure assembly to be within a window opening. Warnick discloses a retractable closure assembly mounted within a window. It would have been obvious to one of ordinary skill in the art at the time of the invention to provide the closure assembly of Kramer to be mounted within a window opening as taught by Warnick since openings within a house are art equivalent and would have been obvious to mount movable screen within any opening of a house thereby

preventing bugs and insects from entering the house and still provide ventilation through the opening.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. patent to Hansen discloses a retractable screen within a jamb. U.S. patent to Lehey et al. disclose a retractable screen within an opening. U.S. patent to Vanasdale discloses a retractable screen within an opening.
